

TO WHOM IT MAY CONCERN

Brussels, 21 March 2016

GS1 is a world-wide not-for-profit organisation with member organisations in over 100 countries. **GS1** develops international standards for product identification using bar-codes and radio frequency identification as well as business-to-business standards for electronic commerce and data synchronisation. Today, over 1.5 million companies worldwide - manufacturers, retailers, SMEs and multinational companies, use **GS1** standards. This has led to increased efficiencies in supply chain operations on a global scale and major cost reductions for business.

Manufacturers and retailers rely on the **GS1** system because they know that the **GS1** (EAN) barcode numbers used on products and communicated electronically in business messages are unique against all other **GS1** numbers. To ensure **GS1** numbers are globally unique and the correct standards based implementation support is provided to local **GS1** user companies, **GS1** has authorised one **GS1** member organisation in each country to manage the **GS1** system.

In **Azerbaijan**, **GS1 Azerbaijan** administers the **GS1** System and is the only official source for GS1 barcode numbers and standards. The GS1 barcode numbers allocated to companies by **GS1 Azerbaijan** begin with the prefix **476**.

Local manufacturers that obtain barcode numbers from web sites claiming the numbers originate with the worldwide body, **GS1**, and are unique globally, should exercise extreme caution. Only **GS1 Azerbaijan** is authorised to provide GS1 barcode numbers with the prefix **476**, the prefix reserved for **Azerbaijan** within the **GS1** system. The barcode numbers provided by these web sites do not originate with **GS1** or **GS1 Azerbaijan** and their uniqueness cannot be guaranteed. Furthermore, **GS1 Azerbaijan** will be unable to validate the numbers for electronic commerce as it has no means of tracing to whom the numbers have been assigned.

The Global Language of Business

Unauthorised barcode number sellers undermine the integrity of the **GS1** standards system, create confusion in the market and disrupt the functioning of supply chains in **Azerbaijan** and abroad. Local manufacturers that obtain their barcode numbers from an unofficial source may suffer losses if their products are rejected by retail.
